Visual Process Flow

UI Mockup

Define Product Requirements Visually

DreamCatcher enables you to visually define product features using Process Flows, UI Mockups, UI Widgets and Business Rules. It lets you create "high-fidelity" mockups that remove ambiguity from your requirements, leaving very little to imagination. The UI widgets you create are interactive and let you simulate end-user behavior, bringing you one step closer to building the right product for your customers. DreamCatcher offers rich support for Graph Widgets, Icons, User Comments and more.

Manage Technical Design Visually

DreamCatcher helps Software Architects manage the technical design and architecture using standardized and repeatable Architecture Patterns for the UI features, as well as for Integrations Points (APIs). This not only saves time for the Architects and Developers, it also helps document the design and architecture with minimal effort, and improves communication within the team.
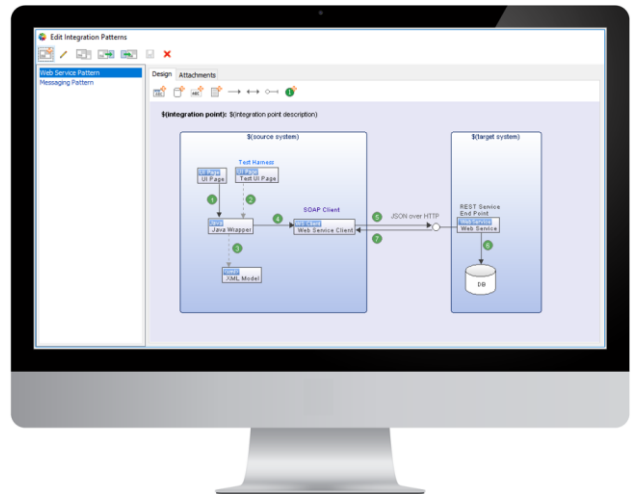

Improve User Experience with Playback

DreamCatcher introduces an innovative feature that will dramatically improve how product feature requirements are communicated & understood by your team. This exciting new feature delivered in Audio-Video format is sure to bring more fun and creativity to your work environment. It is also an excellent way of generating training material automatically from your product requirements, and for conducting sales demos to your customers. It also helps you increase your focus on usability, bringing you one step closer to your customer's needs.
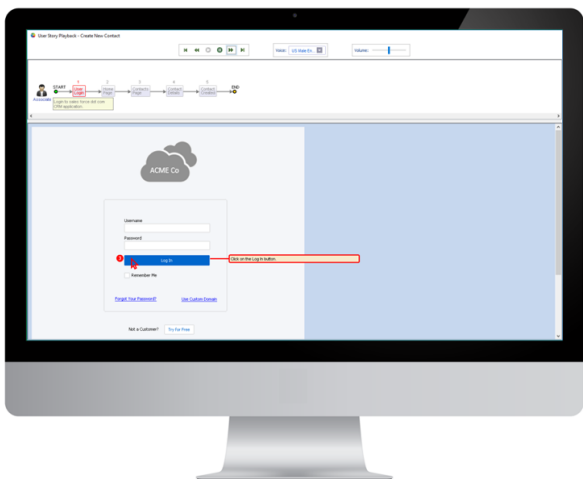

Manage The Agile Process Visually

DreamCatcher helps you manage the Agile software development through visual project management that is driven directly from the product requirements and design. DreamCatcher can automatically generate and estimate the tasks, allowing your scrum masters to focus more on managing delivery risk and less on manual, tedious tasks that do not add value. A visually driven Agile process makes it a snap for your team to locate and update status on their tasks. DreamCatcher also provides fine-grained burndown charts down to individual task level details for additional insights.
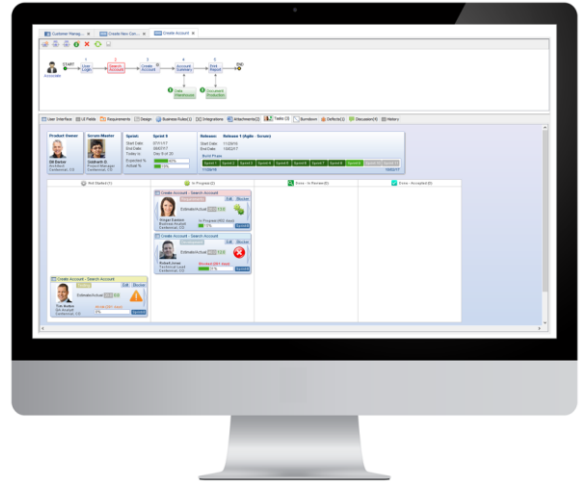

Automatically Generate Key Documents

Automation is a central theme in DreamCatcher, empowering users to automate routine, tedious tasks that do not add value. With DreamCatcher, you can automatically create a detailed Business Requirements Document (BRD), saving time for Product Managers and Business Analysts. You can also automatically generate a detailed Design Document for UI Features and for Integration Points. This helps save significant amount of time for Architects and Developers. You can automatically produce a detailed Product User Guide from DreamCatcher, a real savings in time and effort for your teams!
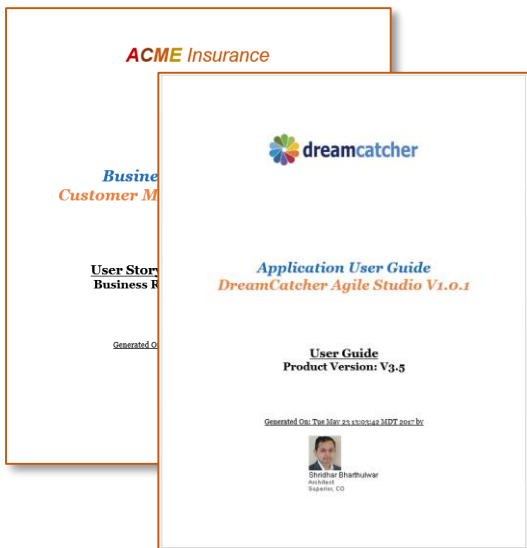

Manage Software Quality Efficiently

DreamCatcher helps your test teams save time and effort by automatically generating detailed, end-to-end test cases from Requirements. DreamCatcher can also generate Selenium Test Cases automatically, a huge time saver! Once Test Cases are automatically generated, the test team can also manage defects in DreamCatcher, side-by-side with requirements, offering improved visibility across team members. You can also visualize defects overlaid on UI Mockups, further improving the team communication and collaboration.

Build the right products for your customers

DreamCatcher helps you succeed in your markets by enabling you to build the right product for your customers. You will also improve your speed to market and deliver your products more efficiently, through a number of automated activities. DreamCatcher also lowers execution risk through improved team communication and collaboration – key ingredients for building successful Software Products. Increased automation and collaboration also leads to more engaged employees, a vital asset for your organization.

1 Increase Speed-to-Market

2 Improve Efficiency

3 Reduce Execution Risk

4 Engage Your Employees
